DESCRIPTION: These vents are designed to be used with Ready to Fit (RTF) enclosures as well as universal vent for many other types of fire pit enclosures. Fig. 1 shows the actual dimensions of each vent.

Fig. 1 Vent dimensions.

Note: Stainless steel parts have plastic film to protect the surface on one side. PEEL the plastic coating off each part before installing.

Table 1: Part Identification

Replacement Parts			
Item #	Part Number	Description	Qty.
1	VENT-6x12SS	6"x12" Stainless Steel Vent	2
2	SCREW1024PANSS	1¼" Stainless steel Phillips pan head screw	12
3	ST3-113-1020	10x24 Stainless steel nut	12
4	WASHER10SS	#10 Stainless steel flat washer	12

Install the vents on opposite sides of the enclosure to ensure cross flow ventilation. Cross flow ventilation is necessary to provide free flowing air to assist in keeping the enclosure dry and cool during operation of a fire pit.

Cut an rectangular opening 9.75" x 3.75" into on opposite sides of the enclosure. Center the vent over the cut out area ensuring the vent slots are clear of any obstruction. Mark the holes with a pencil or marker. Drill six 1/4" clearance holes, place the vent centered over the opening, insert a screw into the vent and enclosure at the same time and secure with washer and nut on the inside. Repeat the process until all six screws are securing each vent into place on both on both sides of the enclosure.
